VAUGHAN'S FAMOUS

Rainbow Garden of Giant Tulips

Order as many collections as you wish.

48 Flowering Size Bulbs, eight each of six named varieties, \$3 separately bagged and labeled. Prepaid for - - - - -

600 bulbs, 100 each of these six named varieties, in original bags, prepaid \$35.00

THIS IS NOT A MIXTURE. Though priced at less than a mixture, it is a labeled collection of finest named varieties. You can plant them for a planned color effect, which will make your display outstanding. These bulbs will bear flowers of the largest size. Each variety comes

in a separate bag, labeled with its name. In favorable locations the bulbs will bloom for years. Only with labeled bulbs is such careful planting possible, since in a mixture, bulbs cannot be identified and their arrangement is a matter of chance.

GOLDEN HARVEST

Cottage. 28 in. tall. This is the largest yellow tulip, with a long season of bloom, growing larger as it develops. We know of no yellow that equals it in size or beauty. First size bulbs. Doz. \$1.25; 100, \$8.50; 250, \$18.75.

RED PITT

Darwin. 24 in. tall. A bright scarlet tulip of vivid tone which outshines the other reds of this class. A harmonious companion and color accent for any planting. First size bulbs. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

CARRARA

Cottage. 22 in. tall. A white tulip of Darwin form, with rounded petals. It is exceptionally large for a white tulip, and may be used with any of the tall late flowering types. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

PRINCESS ELIZABETH

Darwin. 26 in. Largest of the rose pink tulips, this is a favorite everywhere. It is known in Europe as Julie Vinot. Its soft rich rose tines to silvery rose at edges. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

Darwin Tulips Include All Colors of Spectrum

Darwin tulips, a product of plant breeding science, as their name suggests, possess a wider variety of coloring than any other floral strain. Red, yellow, and blue, in infinitely varied combinations, are included in the rich selection which these flowers offer to the color-conscious gardener. Some of more interesting varieties are illustrated on this page, but for a complete list see pages 3 and 4.

GLORIA SWANSON

Darwin. 32 in. tall. Every Darwin tulip variety impresses the viewer with a personal charm, which may be dignified, or gay, modest or flamboyant. Because of this delightful quality, tulips are usually well named; and the christener of Gloria Swanson, expressed in its name the dramatic beauty which it possesses. A giant flower, with lasting qualities, and a star in any company. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

21 Bulbs, 3 each of varieties illustrated on this page	\$2.25

OSSIE OSWALDI

Illustrated Below

Darwin Hybrid. 28 in. tall. Illustrated Below. A gaily colored tulip of red and white, of Darwin form and largest size, this variety has Darwin and Cottage parents. It has the clear coloring of the Cottage race, and wherever it is grown will attract attention and admiration. The flowers are long lasting when cut. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

WILLIAM TELL

Darwin, 26 in. tall. True pink is a rare color in any flower. Tulips have few of them, though rich in lavender pinks. This variety is a larger, more vigorous version of lovely Clara Butt, the true pink tulip which has been a favorite for generations. You will not be disappointed if you try it. Doz., \$1.50; 100, \$11.00; 250, \$26.00.

BLUE EAGLE

Darwin. 29 in. tall. Blue is essential to well balanced color effects. This dark blue provides an effective contrast with all lighter colors, including red, yellow and tints and blends of both. Its own dark beauty is enhanced by gayer companions. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

AFTERGLOW

Darwin, 26 in. tall. The soft, pastel coloring characteristic of Darwin tulips is at its best in this lovely flower, which reproduces the splendor of a sunset, with its deep orange tints suffused with salmon and edged with apricot. Especially lovely under artificial light. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

INSURPASSABLE

Darwin. 27 in. tall. A pale lilac flower of exceptional size and great substance, this variety brings to any color scheme the light blue tones which bring out the beauty of pinks, and yellows equally. Use it freely to complete the balance of all color combinations. Doz., \$1.50; 100, \$11.00; 250, \$26.00.

SUNDEW

Darwin. 25 in. tall. This unique tulip, with fringed petals, is a natural mutant of the popular red variety Bartigon, retaining the brilliant coloring and magnificent size of its parent. It will focus the attention of garden visitors and should be planted with that in mind. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

New Triumph Tulips, Early Darwin Hybrids

Flowers of this new race rival the Darwin clan in size and height, but are earlier, blossom after the single early class is fading, but before the Darwins bloom. They bring to the garden flowers as large and colors even more brilliant than the Darwins, at a time when every bit of garden color is precious.

KANSAS is 22 inches tall, pure white with yellow center. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

CRATER is 20 inches tall, vermillion red with pale edging. Doz., \$1.25; 100, \$8.50; 250, \$18.75.

GENERAL DeWET

Most fragrant of Tulips

For its size, bright color and rare fragrance, General DeWet is a tulip which no garden should be without. There is no other orange variety which equals it in brilliance. It is 10 inches tall, with the largest flower of any early variety, and blossoms two weeks before the first Darwin. The blossoms develop slowly, the color growing richer as it ages, and remain in good condition for an exceptional period. Doz., \$1.35; 100, \$9.50; 250, \$21.00.

KEIZERSKROON

Most Popular Early Tulip

When carpet beds of early tulips were still the fashion in American front yards—back in the Eighties—Keizerskroon was the favorite variety and it still is most popular of its class. Its brilliant scarlet and gold blossoms stand out in the garden to gladden eyes eager for bright color in the drab landscape of early spring. It is a strong and vigorous grower, 10 inches tall, and if only one early tulip is grown, this is the one to command attention. Doz., \$1.50; 100, \$11.00; 250, \$25.00.

Regal Louis XIV Tulip

Breeder Tulip Louis XIV still reigns unquestioned king of the Breeder tulips, and will be a focal point of garden interest wherever it is planted. Its lovely blend of rich coloring is characteristic of this ancient clan, the "mother bulbs" from which all modern tulips were developed. It stands 36 inches tall, and bears a giant flower of jewel-like coloring which has never been equaled by newer varieties. Doz., \$1.50; 100, \$11.00; 250, \$25.00.

LOUIS XIV

Tulip Red Emperor, Largest of All

Doz., \$1.50; 100, \$11.50; 250, \$26.00

A huge scarlet flower with 6 inch petals, which opens to a black center bordered with yellow. It is the largest bright red tulip and the earliest to bloom, as it comes into flower even before the single early varieties. Known to botanists as Tulip Fosteriana, it is a species, or wild form of tulip. Most other tulips are garden forms, not to be found growing wild in the world today. They have been cultivated so long their origin is unknown. But Red Emperor, perhaps an ancestor of the cultivated forms, has never been surpassed by a product of men's breeding skill. No variety has ever been produced which excels it in size, earliness, and brilliance of coloring.

4 GREAT PEONIES \$4.50

Catalogue Value \$5.75
(Add Postage for 5 lbs.)

Of all the new varieties introduced, relatively few survive the test of garden culture and take their place among the acknowledged leaders. The peonies you plant may outlive you, so it is important to choose varieties for permanent planting which have demonstrated lasting merit. The four offered on this page are among the world's best, for display in the garden, or in the flower show. The flowers of each will last for days if cut in the bud stage and allowed to open in the house. Plant as soon as received in full sun, giving three feet in direction from other plants. Do not set the crown, from which the eyes grow, more than two inches below the soil surface.

BARONESS SCHROEDER (9.0) One of the finest peonies in existence. Immense flowers of great substance with high chalice-shaped center. Opens a delicate flesh-white, sometimes a soft baby pink, changing to creamy-white. One of our best cut-flower varieties and an excellent keeper. June rose fragrance, late. \$1.50.

RICHARD CARVEL (8.8) We cannot praise this variety too highly and we believe it deserves a better rating. It is the earliest good double red to bloom and it is usually ready for Memorial Day. The large, globular flowers are all one shade of very bright crimson and have a delicate fragrance. They are beautiful and lasting, either in the garden or when cut; always dependable, blooming well, year after year. \$1.50.

SARAH BERNHARDT (9.0) One of the largest and most beautiful of all pink Peonies. It is a vigorous grower and a prolific bloomer, carrying its perfectly formed flowers gracefully on tall stems. The color is a deep rose-pink, with lighter edging; center flecked crimson. An extra good cut-flower variety. Late midseason; fragrant. \$1.25.

WALTER FAXON (9.3) Ranked by Mrs. Harding with Solange and LeCygne as the three finest peonies. "Here is the most delectable hue of pink displayed by any of the peonies outside of the tree peonies," she writes. It is a free-blooming variety and grows strongly. Should be cut and allowed to open in the house where it will last for days in increasing beauty. Fragrant. Midseason. \$1.50.

Vaughan's Tall, Late, Giant Tulips

All varieties of the tall, late-flowering giant tulips are likely to be grouped in popular language as "Darwin tulips." They are often sold that way, though among them there are several clans, each having definite family resemblances, of which the Darwin, Darwin hybrids, Cottage and Breeder are most numerous.

All these bloom about the same time, and harmonize perfectly in garden plantings. They can be selected by color, height, and form for use in the garden border without regard to their ancestry. The distinction between these various clans tends to become less definite, as they are interbred by growers seeking improved varieties. We continue to list each tulip clan separately, however, to aid you in identifying favorite varieties, and also to give additional descriptive information. For an interesting planting, varieties of all types should be used.

Planning a tulip garden is made easy by the fact that you may count so surely upon each flower blooming as planned. The height, color and flowering season are all so dependable, it is a pleasure to plan a color effect and see it develop in the spring, just as planned.

All Bulbs Listed on this Page are TOP SIZE 12 ctms. up.

EARLY DARWIN HYBRIDS

Early Darwin Hybrids

Not since the Darwin race was introduced, has so great an improvement been made in the tulip family, as in the new Triumph class. Here are early tulips—coming at a time when every bit of color in the garden is more precious because there is so little of it—with stems as tall flowers as large and colors even more brilliant than the Darwins. A hybrid of the Darwin and early singles, the Triumph tulips have a distinctive beauty of their own, and a clear luminous color quality which will make you treasure them. Two full weeks are added to the tall tulip season by planting these.

Colorful Cottage Tulips

All Bulbs Listed on this Page are TOP SIZE 12 ctm. up.

Most new tulips introduced since the war have been of the Cottage clan. By crossing with other types, their clear, bright colors have been united with giant size, so that the largest of all tulips are found among new Cottage hybrids. We list these new varieties, and older ones which are still unsurpassed, in their color classes.

Cottage tulips should be included in every tulip planting. They harmonize perfectly with Darwin and Breeder varieties, and supply a quality of brilliant color which the others need, to set off their softer tones. Some blossom a little later than the Darwins, carrying the tulip season well into the early days of June.

Richly Blended Breeders

All Bulbs Listed on this Page are TOP SIZE 12 cms. up.

TULIP
INDIAN
CHIEF

From Breeder tulips, most of the tall, large flowered types have been developed. These were the "mother bulbs" of ancient Dutch breeders, grown not for their own rich beauty, but because among them would appear flowers of the striped and blotched coloring then esteemed so highly.

These stripes and blotches are now known to have been caused by a virus disease, and the Breeder tulips are valued for their own beauty. Among them are some of the tallest and largest varieties of all, and many colors rare among flowers—browns, bronzes, purples, dull gold and dark lilac, exquisitely blended. One of the most fragrant of all tulips is Don Pedro, a coffee-brown.

ALICE KEITH. (27 in.) Very bright orange-yellow edged golden with small olive green base. Large flower on strong stem. One of the finest Breeder Tulip for bedding. The flower becomes more beautiful as it ages. Doz., \$1.30; 100, \$9.00; 250, \$20.00.

SINGLE EARLY TULIPS IN A SPECTACULAR BED

ENGLISH IRIS

Early Tulips for Front Yards

Front yard flowers are back in fashion, especially for modern homes, with picture windows, set low to the ground level. Here low planting is essential, and what could give greater delight to those who look out the window and the passerby, than a bed or border planting of early tulips which were bred for exactly such a place? They will bloom two weeks or more before the tall, late varieties and bring the first brilliant red and pink flowers to the garden display.

Explanatory The number following the name of the variety denotes the height in inches, while the (a) and (b) indicate their earliness of bloom—the (a's) flower together and are earliest the (b's) flower together, but somewhat later.

Hardy Bulbous Garden Iris

Admirers of the iris will find this group to be valuable additions to their collections. Flowering in late June and early July, they follow the bearded and Siberian irises, prolonging the display and producing flowers of a distinct type and quality of coloring. The colors are clear and brilliant, and the petals are delicate, but of excellent substance. They make quality cut flowers, lasting fully a week in water.

Bulbs should be dug each year after foliage has turned brown. They should be cured quickly in a dry location, and only the largest bulbs should be replanted for flowering.

Iris Tingitana Wedgewood

For indoor use and protected plantings. The amateur should plant his bulbs, six or eight according to size, in a seven- or eight-inch pot. They must be kept cool, 45 degrees or so, until the buds are out of the neck. A great cut flower. Light blue in color. 8-9 ctms for outdoor planting. Doz., 60c; 100, \$4.00; 1,000, \$35.00. 10 ctms up for indoor growing, doz., \$1.70; 100, \$12.00; 1,000, \$110.00.

English Iris

These thrive in any ordinary garden soil but prefer a good loam. The earlier the planting, after beginning of September, the greater the success; the bulbs should be planted 4 inches deep. They flower from end of June to beginning of July.
KING OF THE BLUES Dark blue
LAMARTINE White, carmine rosy flakes.

PURPLE KING Deep purple
QUEEN OF THE BLUES Light blue

Iris Reticulata

Fragrant Iris—Hardy with Protection
RETICULATA. This may be forced into bloom in the house with ease. Six or eight bulbs put into a 4 or 5-inch pot when received will bloom about Christmas time. The fragrant blossoms remind one of a bunch of fresh violets. Perfectly hardy with reasonable protection. It is one of the loveliest early flowering bulbs for the rockery. To show it off well, plant a number of bulbs under the white *Arabis Alpina*. Each, 15c; doz., \$1.20; 100, \$8.00.

Fragrant Hyacinths

Hyacinths contribute to the spring garden fragrance as well as colors which at that time no other flowers can give so well. Indeed, it is doubtful whether at any time of the garden year lovelier true pinks and blues can be found than those which hyacinths provide.

They serve to border paths, near all garden architecture, including ornaments such as bird baths, pools and fountains, and groups of hyacinths may well be worked into the border planting, where they will provide a needed color foil or accent.

For garden planting, it is not necessary to use the largest forcing sizes. Bulbs of third and bedding sizes will do well. Take especial care to plant them in well drained soil, and if there is any doubt, elevate the bed a few inches to keep them above water. Plant bulbs six inches deep, and after the ground has frozen a light mulch to keep the frost in, will benefit.

LILIAN ENCHANTMENT

Mid-Century Lily Hybrid

Lilium Enchantment. Plant U. S. Patent 862

Ready in October

On strong, straight 4-foot stems, lilies of vivid nasturtium red, the size and type of *L. Tigrinum*, are borne in a cluster of buds which open over a period of three to four weeks in late June and early July, depending on the season.

Flowers are held upright and outward, and register their vivid color in the garden picture. This is a hybrid, the first flower having been grown from seed in 1942. It multiplies rapidly from natural increase of the bulbs, and can be propagated easily from bulb scales, underground bulblets, and bulbils which form in the axils of the leaves.

Many consider this variety the best of the new hybrid lilies, bred on the Pacific coast, which promise greatly to enlarge the list of lilies which can be grown in gardens, with no more risk than perennial plants. Plant the bulbs 4 to 6 inches deep in any well drained porous soil in the full sun.

Each, 75c; Doz., \$7.50.

Lilium Fiesta Hybrids

Ready in October

This variety received an award of merit from the Massachusetts Horticultural Society. It bears flowers of Turk's Cap shape, in colors ranging from bright yellow through orange to dark red. They blossom in July and do best in full sun. Plant 5 to 6 inches deep. They spread rapidly from underground stem bulblets.

Each, 75c; Doz., \$7.50.

Hyacinths for Pots

Mammoth Bulbs of any above varieties to Grow in Glasses and Pots.

19 ctms. and over Each 50c; doz., \$5.00; 100, \$40.00.

For Winter Blooming

Light, rich soil produces the best flowers. Place each bulb one inch deep, an inch and one-half from each other bulb or edge of pot. Water well, and set away in a dark, cool cellar, or an outdoor pit which is well drained. If outside, cover with three or four inches of sand or ashes. Let them remain there for eight or ten weeks to root, then bring them into a warm room, but keep them in the dark (cover the pot with a paper bag, cloth, etc.). Then when the flower spike is three or four inches out of the bulb, they may be exposed to the light, and will open beautifully.

Hardy Lilies

For Fall Planting

Lilies are hardy, thrifty flowers, capable of surviving conditions which would overcome flowers much less beautiful. Grow them in the border in small groups, with background, where their beauty has a suitable setting for its display. They blossom, as a rule, in midsummer, when fine flowers are at a premium. With each order a leaflet giving instructions for growing them in the garden will be sent. They should be planted on receipt to enable the bulbs to begin root growth this fall.

Outdoor Culture—When planting lilies out-of-doors, see that they have a well drained position, and where they will be shaded from very hot sun. Such places can usually be found around the shrub borders, and in the hardy plant border. Never mix manure in the soil around lilies, but enrich with a standard commercial plant food or with bone meal. Many varieties are termed "stemrooters," that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top-dressing of good rich soil on which they can feed freely. Spade over the ground thoroughly to a depth of 18 inches before planting lilies. Plant the bulbs 4 to 8 inches deep, depending on their size and the soil, deeper in light soil.

GIANT TRUMPET BEERSHEBA

Daffodils are the first of the major garden flowers to blossom in the spring. This makes them doubly precious, as heralds of a season of joy, after the long winter.

The daffodil tribe likes a cool root run and its flowers are at their best in the cooler days of spring. Therefore it is essential to dig the soil deeply and provide humus. Like the tulip, the daffodil will not thrive if there is fresh manure in the soil and commercial plant food should be used when the bulb is planted. It likes a moist soil but it must have excellent drainage. The plant food should be mixed in the soil below the bulb and if the soil is heavy, a cushion of sand is advisable.

Daffodils are particularly fine subjects to plant under the edge of bushes or among perennials in the hardy border as they seem to like to nestle among the roots of their neighbors.

Sensational Merion Blue Grass Again Available to Early Buyers

Life-size Closeup Taken in July of Merion Blue Grass Turf Cut with Mower, Set 3/4-in. Note Heavy Stand, Healthy Texture and Vigorous Weedless Growth.

Research on lawn problems conducted for many years is made available to amateurs in Vaughan's Merion Blue Grass Formula, which gives promise of revolutionizing lawn making practice in the United States.

Traditional rules for lawn mixtures are discarded, and the grasses used in such mixtures for the past century passed-by, to produce lawn seed which has all the virtues of the old-time blends, without the faults which have often made the task of maintaining lawn beauty throughout the garden season difficult.

MERION BLUE GRASS

For those desiring straight Merion Blue Grass we can offer up to a maximum of 10 lbs. per customer due to the limited quantity. One lb. will sow 750 sq. ft. 1 lb. \$4.90 per lb.; 3 lbs., \$14.70; 5 lbs., \$24.25; 10 lbs. \$48.00, all postpaid.

In the fall it is more important than ever to sow only permanent grasses. For a lawn of permanence and beauty, our famous Parks mixture is recommended, containing fancy, re-cleaned seed of fine leaved, hardy, lasting grasses of high purity and germination. It contains a liberal amount of Creeping Red Fescue, which spreads from the roots and so helps thicken the turf and crowd out weeds. See prices above.

VAUGHAN'S "COLUMBIAN"

When making a lawn on sandy soil or in moderate shade, Vaughan's "Columbian" is the correct blend. Prices same as Parks, above.

VAUGHAN'S DENSE SHADE FORMULA

Composed of grasses most suited for growing in heavily shaded situations. A splendid mixture. It is also satisfactory in light shade. Prices same as Parks above.

VAUGHAN'S EXCEL FORMULA

An economy blend for new seedlings and quick results which should be followed by reseeding with a more permanent blend like our "Parks". In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine.

MERION BLUE GRASS FORMULA 100% PERENNIAL GRASSES

Contains by weight:

- 40% Merion Blue Grass (Due to small size of seed this will give you over 900,000 seeds of Merion Blue Grass in one pound)
- 40% Illahee Fescue
- 10% Highland Bent
- 10% Red Top

1 lb. \$3.00; 3 lbs. \$9.00; 5 lbs. \$14.75; 10 lbs. \$29.00.

Produces thicker turf, stays greener all summer and stands closest mowing. 1 pound covers 750 square feet, 3 times as much as standard blue grass mixtures, thus being no more expensive to sow an equal area.

40% MERION BLUE GRASS, propagated from a single plant selection, which has demonstrated in trials throughout the country ability to stay green all summer, stand close mowing, and resist leaf spot and other diseases. Because its growth is more stocky and spreading than standard blue grass, it covers more ground, and less seed is required for a given area. We regard it the most important lawn grass introduction in the last century.

40% ILLAHEE FESCUE, an improved strain of creeping red fescue, stronger growing and more resistant to disease. It spreads by root runners, and its leaves match the texture of Merion blue grass. It thickens the turf, does well on sandy soils and in shade.

10% HIGHLAND BENT, dry land or upland bent, more drought and disease resistant than most bents and not requiring the care of creeping bent, it spreads underground and makes a thick turf, helping keep down weeds and spreading quickly to cover bare spots. Its dark green color persists through summer drought and heat; and it germinates so quickly after sowing as to act as a nurse crop for companion grasses.

10% RED TOP, a nurse grass to help keep weeds under control until the Merion Blue Grass can take over.

SEED OF THE BENT GRASSES

For lawns Bent grass from seed is preferred to creeping Bent stolons because it does not grow so rapidly or require so much cutting and top dressing. Seed 3 to 4 lbs. per 1000 square feet.

ASTORIA BENT GRASS. This grass has creeping roots which throw up new shoots and make a very thick turf. It makes a splendid lawn and golf grass. Requires less care than the aggressive surface creepers. Price, 1/4 lb. 60c; 1/2 lb. \$1.00; 1 lb. \$1.75; 2 lbs. \$3.50; 3 lbs. \$5.20; 5 lbs. \$8.50; 10 lbs. \$16.75; 15 lbs. \$24.75; 20 lbs. \$32.60; 25 lbs. \$40.00.

SEASIDE CREEPING BENT GRASS. This is a true creeping Bent grass seed. One or two top dressings a year will keep it in good condition. Does not require as much cutting as the varieties of bent grown from plugs and stolons. 1/4 lb. 55c; 1/2 lb. 95c; 1 lb. \$1.70; 2 lbs. \$3.40; 3 lbs. \$5.05; 5 lbs. \$8.25; 10 lbs. \$16.25; 15 lbs. \$24.00; 20 lbs. \$31.60; 25 lbs. \$38.75.

Hardy Perennial Plants for Fall Planting

HARDY perennials may be set out this fall in time to become well established before winter sets in, and next year will see them better developed, and bearing finer flowers than can be obtained from plants set in your border next spring.

We do not list the kinds which need special protection through the winter. It is always well to apply a light mulch of straw or excelsior over newly planted perennials after the ground has frozen. This will tend to prevent winter thaws and frost heaving.

No orders for Perennial Plants accepted for Fall delivery after October 10th.

Add Postage for Plant Orders

Prices on this page do not include postage. For 12 plants or less include in your remittance postage in the following amounts: Single plants, 12c; 3 plants 16c; 6 plants, 20c; 12 plants, 25c. Shipments larger than 12 plants will be made by express collect, unless otherwise instructed.

DELIVERY GUARANTEE

We guarantee that all perennial plants are properly matured for use of the home gardener and that they will reach the customer in good condition.

Any complaint as to quality or condition of plants must be made at once upon receipt of shipment, and letter accompanied by packing sheet.

Check your order carefully before mailing. It is almost impossible to make changes on orders after they have been placed in process of filing.

Please remember that a plant is a living organism, it feeds, drinks and breathes and must be cared for accordingly.

When you sow seeds of annuals in Fall, you imitate Nature's method. Practically all hardy annuals will produce stronger, sturdier plants with earlier bloom by this method. Even when spring sowing is desirable, experienced gardeners also sow in fall because they then have a continuous season of bloom. Also, they can sow at their leisure instead of trying to plant everything in a few short weeks. Do not be in too much of a hurry to sow.

The ideal time is just before the ground freezes for the winter. November 15th is early enough in normal seasons in the vicinity of Chicago and New York. If the ground has been prepared in advance, sowings can also be made during winter thaws.

A fine seed bed is desirable, if the sides are protected with boards it will save the seed from washing away. A light covering may be used if birds are troublesome. Plant at half the depth used when sowing seed in spring. Broadcast all small seed.

★Varieties preceded by star are especially recommended for sowing in the fall above your bulbs. They will grow in the spring and blossom after the bulbs. Their shallow roots will not interfere with the bulbs maturing properly; their growth will conceal the bulb foliage after it grows yellow and unsightly.

New Pink Delphinium

- 7535 DELPHINIUM ASTOLAT.** For several years Frank Reinelt, originator of Pacific Hybrid Delphiniums, has been working to create pink delphiniums, equaling in size and beauty of flowers his famous white and blue varieties. Success has rewarded his efforts in this new strain, with flowers in varying tints of blush pink, true pink and mulberry pink, all with dark bees. They grow tall, with strong, whippy stems, with florets as large and spikes which compare favorably with those of the other Pacific Giants. All the various pink tones are lovely to see. The outstanding perennial novelty of the year. Pkt., \$1.00.

PLANTS BY PARCEL POST—ALL PRICES ON IRISES ARE PREPAID IN THE U.S.A. if your order amounts to \$3.00 or more. If under \$3.00, add 35c for postage and handling.

PLANTS BY EXPRESS—We recommend this mode of transit where quantities are over 18 to 24 plants. We pack carefully, but accept no responsibility for delays over which we have no control that may cause injury to the contents.

"S" refers to the three standard or upright curling petals, "F" to falls or drooping petals.

Irises are most effective if planted 3 of a kind in a clump.

DYKES MEMORIAL MEDAL. This is an award made annually in America, France and England for the best Iris of the year.

As soon as iris plants are received, plant them in a sunny, well drained place. Each plant should have at least eighteen inches clear space from other irises, as it will grow in a circle and many varieties spread rapidly. The rhizome, or fleshy root stock from which the leaves and roots grow, should be barely covered with soil, with the roots properly spread below, and the soil well firmed about them. Until the plant is established, give it frequent attention, watering in dry spells. In the first winter, after the ground has frozen, a light mulch to prevent thawing and heaving will be beneficial.

Vaughan's Peonies

PEONY THERESE

PEONIES, especially the modern introductions, are probably the most valuable, and most beloved of all perennial plants. Planted in sun or semi-shade in single clumps or long beds; or bordering lawns, shrub rows, and drives, they give a grand display of large fragrant blossoms of brilliant colors during June, followed by their exquisite foliage which is very ornamental during summer months. They are also most effective for home and table decorations, and last longer in water than many other perennials. Avoid buying cheap Peonies; they require just as much care as the better kinds, and are disappointing in the end.

Peonies may be planted from September first until May. We offer Divided roots, having 3 to 5 eyes.

The figures following the varieties are the latest ratings given to them by the American Peony Society, based on a scale giving 10 points for perfection.

Roots by Parcel Post.—If to be sent by parcel post, add postage as follows: Single roots, 2 lbs.; two roots, 3 lbs.; 3 roots, 4 lbs.; 4 roots, 5 lbs.

Pointers on Planting Fall Bulbs

The first two months of spring, when garden beauty is most welcome, yet most rare, hardy bulbs supply the dominant flowers. And of all flowers, they offer the easiest, surest success.

Spring flowering bulbs prolong the garden season for a month at least; and in most sections they bloom at a time when all their surroundings are fresh and beautiful; when moisture is ample, weeds have not yet grown, and few if any insects bother them.

The greatest enemy of fall bulbs is poor drainage; they must be planted in locations where water drains away quickly, and if there is any doubt about this, beds should be raised above the surrounding surface sufficiently to insure it.

Figures given in this table are minimums, and in some cases should be greater. See discussion in column to left, headed "Pointers on Planting Bulbs."

9 IN.	HARDY LILIES 12 TO 15 IN. APART

	GRAPE HYACINTHS 3 IN. APART
	LATE TULIPS 5 TO 8 IN. APART

Bulbs will grow well in any reasonably good garden soil, but it should be well prepared to a depth of at least twelve inches. The depth of planting varies with the kind of bulb, but the depths shown on the accompanying planting chart are minimums, with deeper planting advisable in many cases.

When tulips are to be left for several years without lifting, bulbs should be placed 10 to 12 inches deep, where they will be cooler, will produce fewer "splits" and continue to maintain blooming size for long periods. Use no manure on bulbs unless it has been thoroughly rotted and can be spaded into the ground several weeks previous to planting. A balanced plant food applied to the soil at the rate of 5 lbs. to 100 square feet and spaded into the soil will benefit the bulbs.

The earlier bulbs blossom in the spring, the more important it is to plant them early in the fall, so they will have time to make root growth in their new location. Daffodils and hyacinths especially benefit from early planting.

After the soil has been prepared, bulbs may be planted with a trowel, or by the use of a blunt-end dibber. Avoid using a pointed dibber, or any device which will permit the bulb to be caught by the sides of the hole with air beneath it. The bulb should rest on the bottom with soil packed firmly around it.

What is known as the Dutch method is sometimes followed in planting beds. Soil is thrown out to the proper planting depth, bulbs are then placed where they are wanted and the soil filled in above them. This is a convenient method where a formal pattern is followed in placing the bulbs.

In case of necessity, however, fall bulbs can be planted as late as the ground can be worked. It is a good rule to plant all bulbs as soon as you receive them and you are willing to disturb established beds. Tulips should go in when the leaves fall. When late planting is necessary, cover the bed with a mulch of leaves after the ground has frozen. This will prevent winter thaws, and consequent frost heaving.

After bulbous plants have flowered, their leaves should not be cut or disturbed until they turn yellow, which indicates that the bulbs have ripened.

HOLE-IN-ONE PLANTING TOOL

Parrot Tulips have the largest blossoms, with long, deeply fringed petals and more of them. Prior to the world war, named varieties were few, and the new ones listed in this catalogue together with the new late double tulips are the outstanding post-war novelties. Groups in the border will attract every eye, and their cut flowers rival orchids in arrangements. Named varieties of Parrot tulips are of recent development. For a complete list see Page 6.

In the extraordinary size of its blossoms, and its beautifully fringed and fluted petals, Fantasy is really unique. It has a straight, stiff stem, which makes it stand up in the border. Fantasy originated as a sport of the famous Darwin tulip Clara Butt, and perhaps its greatest charm is the clear, true pink color. Each petal of a well grown specimen of Fantasy will measure three inches long and two inches across. On the back of each petal is a marking of emerald green.

PEONY FLOWERED TULIP EROS. Illustrated above. In any planting of tall, late giant tulips, a group of Eros will be the focal point. Our strain of giant flowered amaryllis is rich in brilliant red and lovely white flowers. With many the white ground is vividly marked with contrasting tones of red, pink and salmon.

Place only one bulb in a pot. Water sparingly at first until the flower shoots begin to appear. Some growers keep them in the dark until the flower stems are four or five inches long, and then bring to light.
